

NEW Computer Programs for Greenhouse Crop Monitoring

FloraSoil and FloraPest

Graphical tracking of soil test results and insect counts on computer

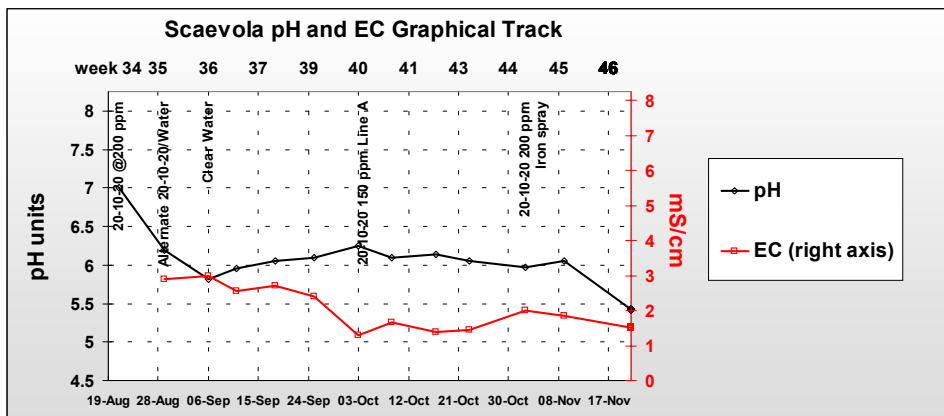

Are you making the best use of your soil test or pest-scouting results?

FloraSoil and FloraPest help you see trends in monitoring data and improve fertilizer and pest control decisions.

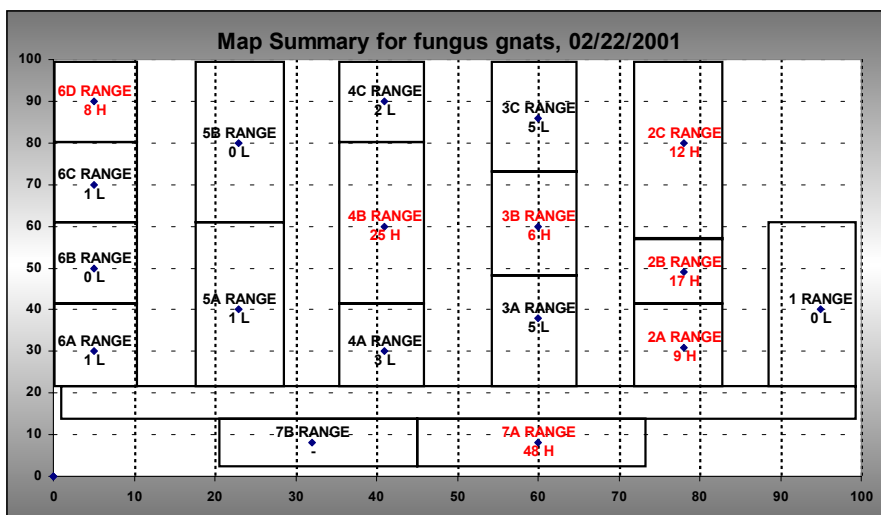

See trends easily and visually and avoid expensive crop losses

- View graphical tracks that compare actual and target values over time
- Compare different crops on the same graph
- Or view several factors for one crop, along with fertilizer or pesticide history

Focus quickly on problems

- Report and Map modes highlight problem crops by showing areas with high or low test results in different colors

Manage your piles of notes and data

- Set up a database of up to 60 crops
- Quickly enter test data using menus
- Minimize down-time sitting in front of the computer

Easy to use and set up

- From the successful UNH FloraTrack™ series of graphical-tracking programs
- Requires Microsoft Excel 2000, a PC with at least 10 Mb hard disc space, 200 MHz processor, 128 Mb RAM, and Windows 95 or more recent
- Based on research at the University of New Hampshire, funded in part by the Bedding Plants Foundation, Inc. (BPFI-FIRST)
