**Sun/Shade:** prefers full sun, tolerates partial shade, flowers best in full sun **Salt:** some observed tolerance

**pH**: ≤ 8.2

**Insect/Disease Factors:** resistant to powdery mildew (the most common Lilac problem), susceptible to a number of lilac problems that are rarely serious or limiting in Northern regions, although in warmer regions borers and scale may be serious problems

**Growth Characteristics:** 

Height: 20'-25' Width: 15'-20' Form/Habit: oval Rate: slow

## **Ornamental Characteristics:**

**Flower:** showy, cream colored, 6"-12" long pyramidal-shaped cluster, summer (late June in central NY)

**Fruit:** <sup>3</sup>/<sub>4</sub>" long capsules, persistent clusters, obvious but not necessarily attractive

Seasonal Foliage Color: dark green in summer, fall color often nonexistent, occasionally turns dull yellow in fall

Bark: attractive, cherry-like, smooth reddish-brown with horizontal lenticels

**Transplant Issues:** easy to transplant B&B or  $\leq 2$ " caliper bare root

Management Issues: none of significance

Suggested Uses: narrow or wide street tree lawns/pits, parks, suitable for CU-Structural Soil<sup>™</sup> Cultivars: 'Ivory Silk' (upright habit, dense, compact, heavy flowering, flowers at young age, grows faster than 'Summer Snow'), 'Summer Snow' (round, compact, 16'-20', glossy leaves, heavy flowering), Regent<sup>™</sup> ('PNI 5723', upright form, pure white flowers, glossy foliage)

\* var. *mandshurica* not recommended due to shrubby tendencies and extremely slow growth rate (also may not be as hardy as the species)
