

Scientific Name: *Viburnum sieboldii*

Common Name: Siebold Viburnum

Environmental Conditions:

Hardiness Zone: 5 (4)

Soil Moisture:

VERY WET			VERY DRY								
occasionally saturated or very wet soil			consistently moist, well drained soil			occasional periods of dry soil			prolonged periods of dry soil		
	2	3	4	5	6	7	8	9	10	11	12

Sun/Shade: prefers full sun, tolerates partial shade

Salt: unknown

pH: ≤ 8.2

Insect/Disease Factors: none serious or limiting

Growth Characteristics:

Height: 15'-20'

Width: 10'-15'

Form/Habit: open, multi-stemmed, often considered large shrub, can easily be small tree with pruning

Rate: medium to fast

Ornamental Characteristics:

Flower: creamy white, 3"-6" flat-topped clusters, late spring

Fruit: showy, red drupes in clusters, turn blue-black in late summer, fruit display typically short as birds eat fruit quickly, red stalks persist into fall

Seasonal Foliage Color: lustrous, leathery, dark green in summer, fall color usually nonexistent, although red-purple potential observed

Bark: not ornamentally important, gray-brown

Other: holds leaves late into fall

Transplant Issues: easy to transplant B&B or ≤ 2" caliper bare root

Management Issues: low branches may require pruning for street tree use

Suggested Uses: wide street tree lawns/pits, narrow tree lawns/pits with pruning, parks

Cultivars: 'Seneca' (heavy flowering/fruited form, fruits have long-lasting red color stage – up to 3 months, very firm fruit not preferred by birds, reportedly good red fall color)
